

DON'T EYE IT, VERIFLI IT.

View frame strength trends, distributions, comparisons, maps and specific hive information — all in one easy-to-use, easy-to-view dashboard.

WHO WE ARE

The Bee Corp is an Indiana agtech company developing solutions for commercial pollination.

WHAT WE DO

Verifli is a digital hive grading service powered by infrared (IR) image analysis. Our team grades your hives overnight when IR is most accurate. Wake up to results on your Verifli.com dashboard, where you can compare hive strength between different sites and beekeepers. Use the mapping tool to pinpoint the location of weak bees and dispatch your beekeeper to fix the issues.

HOW IT WORKS

With a single IR image of the hive surface, Verifli captures the thermal signature of the bee cluster within each hive. Adjustments are made using real-time weather information based on the time of day and location where each image is taken.

HOW YOU GET STARTED

Give us a call at (559) 314-2030 or visit thebeecorp.com/verifli.

“Currently, grading beehives is a human factor. If we can use technology and take the human factor out, that’s a win-win for everybody.”

— Josh P., Tipton, CA

“You said what if we could look inside the hive without taking it apart and know how many bees are in there. And I thought well, yeah, she’s crazy. But what a great idea.”

— Dave P., Manteca, CA

For both beekeepers and growers, Verifli is brought to you by The Bee Corp. Ensure pollination transparency with easier, faster hive grading at:
